

1. How does EOL support to patients in the community differ from normal EOL situations?
2. What variety of medications are required to treat COVID-19 patients in EOL in a community setting?
 - a. Could a limited number of medications be used to cover the significant majority of patients in this cohort?
 - b. i.e. is the preparation of standard treatment packs a viable approach to cover 80% of patients?
3. Are oral medications appropriate for COVID-19 patients in their last few days?
 - a. Can they be effectively administered?
4. Have you resorted to non-injectable forms of medicinal support for COVID-19 end of life patients?
 - a. If so, what drove you to do so?
5. What length of time would it be normal to expect to need palliation for patients in the community?
6. Are there any top tips you would suggest for palliative care of end of life COVID-19 patients in the community?
7. With the benefit of hindsight is there anything you wish you would have done before or done differently?
8. Community Pharmacy - How have you approached supporting community pharmacy staff to ensure their safety?
