## **Foreword**

From the days of the first apothecaries, the profession of pharmacy has worked to develop new products and new systems.

The International Pharmaceutical Federation (FIP) has always recognised the need for progress and, from its inception, has been actively involved in leading the way forward in many areas of practice.

In meeting the challenge of its Strategic Planning Objectives “To Raise Professional Standards”, the Community Pharmacy Section decided, in 1999, to establish a Working Group “Quality Care Standards in Community Pharmacy Practice” with the stated aim of further developing guidelines which member organisations could use to assist in the development and implementation of their own Pharmacy Standards projects.

The Working Group first met in September 2000 and consisted of Frans van de Vaart from The Netherlands, Olivier Bugnon from Switzerland, Lilian Azzopardi from Malta, Greg Hodgson from Australia, Anita Martini from Sweden, and Bob Grant, an Australian Executive Committee member of the Community Pharmacy Section, acting as Chairman. The Working Group was later joined by Graham Bridge and Tim Logan from Australia and by Pia Ungvari from Sweden.

Each of the members of the group has been involved in their own countries in the Quality Standards area.

The Executive Committee of the Community Pharmacy Section wishes to acknowledge and thank the members of the Working Group for their participation and time so generously given, and to thank member organisations for their responses to our survey letter.

On the basis of the report the Executive Committee recommends that all member organisations embrace the adoption of a Quality Care Standards Programme by considering the recommendations made in this report. We hope the recommendations can be an inspiration for beginning, or continuing, the process.

Executive Committee of the Community Pharmacy Section  
September 2004

Avi Moshenson, President

## **Introduction**

The Working Group was established with the aim to give recommendations for the development and implementation of Quality Care Standards for community pharmacy practice and to make them available for all FIP members. The ultimate aim was to improve the professional standards of pharmacy worldwide.

To commence the task, the Working Group discussed the elements, which would need to be examined, and the information, which would need to be gathered in order to make progress.

In looking at the elements involved we recognised:

- The need to have clarity in terminology with different quality systems in use
- The different pharmacy practice systems throughout the world
- Not to be prescriptive in developing a “one-size-fits-all” solution
- That there are many ways of practicing pharmacy in different economic and political systems.

We agreed that we would present a report outlining what we saw as the essential elements to be included in a system along with examples of other elements which could be included if desired or useful.

We decided to develop a questionnaire to be sent to FIP’s member organisations of which 23 national organisations participated in the investigation.

In collecting data, the Working Group took into consideration:

- The purpose and the background for the development of standards
- To what extent the standards are being used
- Possible legislative backing for the standards
- The pharmacy system under which the standards are developed and used.

In September 2003 the Working Group presented an analysis of these responses to the Executive Committee as well as systems from Switzerland, Sweden and Australia were demonstrated.

I wish to thank my colleagues in the Working Group for the time and efforts they have brought to this important initiative from the Executive Committee of the Community Pharmacy Section of FIP.

September 2004

Bob Grant  
Member, Executive Committee of the Community Pharmacy Section of FIP  
1996-2004

# Quality Care Standards Analysis

By Lilian Azzopardi

Quality in health care presents a range of interpretations including accreditation and certification, compliance with rules and regulations, meeting established levels, use of modern equipment, efficiency, and performing inspections. When taking into account a patient-oriented approach, quality of pharmacy services represents optimum patient care to meet patient's needs. So, structures and processes are necessary to measure the patient care provided and, therefore, measure quality.

These systems are presented in Quality Care Standards, the presentation of which could vary depending on the interpretation of a quality care standard.

## Rationale

- Quality Care Standards confirm the effectiveness of the pharmacist intervention in patient care.
- Quality Care Standards present a process that will assist the pharmacy profession to gain confidence in the services it provides.
- Quality Care Standards can be used to demonstrate the good standard professional services provided by community pharmacists.
- Any process where there is no form of quality assessment may constitute a threat to society and to the profession. Quality Care Standards present processes which monitor professional pharmacy services.

## Recommendations

- *The profession is now in a position to implement the process of Quality Care Standards.*
- *Quality Care Standards should be developed by national pharmacy organisations so as to provide a system that reflects standards of professional services provided by community pharmacists.*

## Development of Quality Care Standards

- The Quality Care Standards should be viewed as a process that will benefit the profession to determine a confirmation of the pharmacists' participation in patient care.
- Practicality should be the main focus of development of the standards whilst maintaining acceptable robustness.

## Recommendations

- *Pharmacists practising in the community pharmacy setting, other health professionals, consumers and representatives of the payers should be included in the discussions for the development of the Quality Care Standards.*
- *Quality Care Standards should be regularly reviewed and updated.*
- *Quality Care Standards should be developed as a generic approach taking into consideration the various activities undertaken by community pharmacists when providing professional services.*

## **Recommendations for the Implementation of Quality Care Standards Programmes**

This document presents guidelines, which could be followed by different countries to begin or continue the process of developing and implementing Quality Care Standards. The guidelines are presented as a step-wise approach, and each country could consider moving from one stage to another depending on the particular situation and on the needs of the profession in the country.

- The Quality Care Standards programme should be established as a process of continuous quality improvement. It is advisable that the implementation of Quality Care Standards is based on a step-by-step process of quality improvement.
- The elements of a Quality Care Standards programme are divided into three stages (stage I, II, III). National pharmacy organisations should promote the development of Quality Care Standards based on this step-wise approach to achieve continuous service improvement.
- Quality Care Standards at the level of stage I of the programme should be promoted amongst national pharmacy organisations.

## Quality Care Standards Programme: Stage I (Minimum requirements)

Areas to be included	Domains
Setting of the pharmacy	<ul style="list-style-type: none"> <li>• Appearance of the pharmacy</li> <li>• Accessibility of the pharmacy</li> <li>• Window dressing</li> <li>• Dispensing area</li> <li>• Counselling area/Pharmacist consultation area</li> <li>• Staffing</li> </ul>
Handling of stock and preparation of medicines	<ul style="list-style-type: none"> <li>• Purchasing of stock</li> <li>• Storage of stock</li> <li>• Maintenance of quality of stock (identification of expired products, recalled medications)</li> <li>• Availability of standard operating procedures for extemporaneous dispensing</li> <li>• Documentation of extemporaneous preparations</li> <li>• Storage of raw materials</li> </ul>
Provision of prescription medicines	<ul style="list-style-type: none"> <li>• Prescription receipt and patient identification</li> <li>• Prescription checking</li> <li>• Provision of information on the use of medication(s)</li> <li>• Dispensing of medication(s)</li> </ul>
Supply of non-prescription medicines for self-care	<ul style="list-style-type: none"> <li>• Advice on the selection of medicines</li> <li>• Advice on the use of non-prescription medicines</li> <li>• Responding to minor ailments</li> </ul>
Interaction with patients	<ul style="list-style-type: none"> <li>• Communication skills (verbal and non-verbal messages) of pharmacists and pharmacy staff</li> <li>• Provision of advice on the safe use of medicines and on the management of disease conditions</li> <li>• Promotion of good health</li> <li>• Provision of written information (labels, leaflets)</li> </ul>
Documentation systems	<ul style="list-style-type: none"> <li>• Patient medication profiles</li> <li>• Formulary systems</li> <li>• Policies and standard operating procedures</li> <li>• Documentation of pharmacist interventions</li> </ul>

## Quality Care Standards Programme: Stage II

Areas to be included	Domains
Equipment	<ul style="list-style-type: none"> <li>• Cleanliness and good state</li> <li>• Routine maintenance/ validity</li> <li>• Availability of refrigerator, counting devices, and other dispensing equipment</li> <li>• Reference drug information systems (e.g. pharmacopoeia)</li> </ul>
Health promotion activities	<ul style="list-style-type: none"> <li>• Distribution of leaflets</li> <li>• Display of health promotion advertisements</li> <li>• Participation in health promotion campaigns</li> </ul>
Diagnostics	<ul style="list-style-type: none"> <li>• Provision of diagnostic tests e.g. blood pressure monitoring, blood cholesterol testing, blood glucose testing, monitoring of peak expiratory flow rate, urinalysis and pregnancy testing, body weight monitoring</li> <li>• Documentation of diagnostic tests carried out</li> </ul>
Pharmacotherapy monitoring	<ul style="list-style-type: none"> <li>• Development of pharmaceutical care plans</li> <li>• Patient monitoring</li> <li>• Identification of medication-related problems</li> <li>• Interaction with prescribers</li> </ul>
Research and professional development	<ul style="list-style-type: none"> <li>• Participation in research projects</li> <li>• Participation in continuing professional development activities</li> </ul>
Audit	<ul style="list-style-type: none"> <li>• Development of quality manuals for the pharmacy system</li> <li>• Running audit exercises for services provided (self-audit)</li> </ul>

### Quality Care Standards Programme: Stage III

Areas to be included	Domains
Domiciliary services	<ul style="list-style-type: none"> <li>• Provision of pharmaceutical services to house-bound persons, nursing homes</li> <li>• Procedures</li> </ul>
On-line services	<ul style="list-style-type: none"> <li>• Provision of on-line pharmacy services</li> <li>• System maintenance and update</li> <li>• Handling requests</li> <li>• Website</li> </ul>
Pre-registration training	<ul style="list-style-type: none"> <li>• Acceptance of pre-registration trainees</li> <li>• Monitoring and documentation requirements</li> <li>• Activity description for trainees</li> </ul>
Parapharmaceuticals	<ul style="list-style-type: none"> <li>• Availability of medical devices, homeopathic products, and other parapharmaceutical and non-pharmaceutical items</li> <li>• Display of parapharmaceuticals</li> <li>• Information on parapharmaceuticals</li> </ul>
Customer perceptions (external audit)	<ul style="list-style-type: none"> <li>• Views of patrons on service provided</li> <li>• Expectations of patrons from pharmacists</li> </ul>

## **Presentation**

- Quality Care Standards should be developed where statements reflect the domains pertaining to the area considered. Statements should be clear, concise and specific.
- Quality Care Standards should initially be presented in the *Guidelines format*, whereby they are intended to create a quality environment, promote responsibility for quality and provide information on the standards required. The *Guidelines format* consists of the areas considered with details on domains pertaining to the service considered.
- Within the step-by-step process of quality improvement, consideration should be made to subsequently develop the Quality Care Standards programme in an *Audit format*. In the Audit format there is a quantitative approach towards the domains that are followed and, therefore, presents a tangible outcome when the Quality Care Standards are implemented.

## **Dissemination of the Quality Care Standards**

- Quality Care Standards should be made available to practising pharmacists and should be widely promoted by the national pharmacy organisations and collaborating institutions.
- Quality Care Standards should be presented as a hard copy to all pharmacists and summarised versions may be presented to consumer organisations and other health care professionals.
- Consideration should be given to the availability of the Quality Care Standards electronically via a website and on CD-ROM.

## **Conclusion**

Community pharmacists are obliged to ensure that the services they are providing to society are of the appropriate quality. Quality Care Standards are the tools with which to measure the quality of the service provided. Quality Care Standards should not be viewed as a necessary evil but as a process that will aid the profession to determine a confirmation of the pharmacists' participation in patient care.

This document provides leadership in the development and implementation of Quality Care Standards programmes amongst national pharmacy organisations in different countries.

## **Appendix A: Terminology**

### **Audit format**

Framework whereby scores are assigned for each statement within a standard

### **Continuous quality improvement**

A process by which shortcomings are identified, recommendations issued and activity is, again, monitored within an established timeframe

### **Domains**

Indicator variables

### **External audit**

Process performed with members of the public and health professionals other than pharmacists

### **Generic standard**

Standard which takes into account different activities within the professional services offered

### **Guidelines format**

Presentation of standards whereby statements explain the requirements for each domain

### **Quality assurance**

Identification of standard of professional services provided

### **Quality manual**

Compilation of standards required

### **Self-audit**

Process which could be undertaken by the community pharmacist

### **Specific standard**

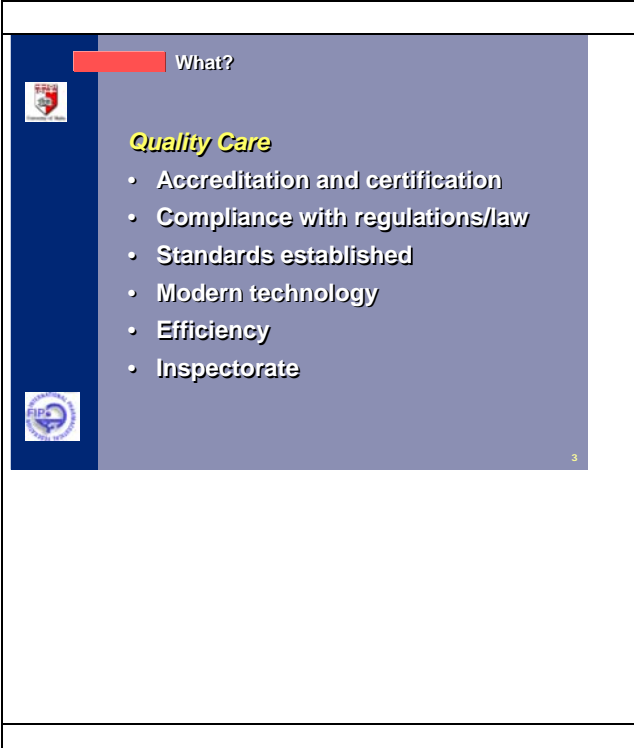

Standard developed for a specific activity carried out by the pharmacist

## Appendix C: Analysis of Responses

The following is a copy of the PowerPoint presentation made by Lilian Azzopardi on behalf of the Working Group on the occasion of the FIP Congress in Sydney in 2003.

 <p>QUALITY CARE STANDARDS WORKING GROUP Community Pharmacy Section</p> <p>Analysis of responses</p> <p>Lilian M. Azzopardi, Malta – Sydney 2003</p>	<p><b>Slide 1</b></p> <p>It has really been a nice experience to participate in this working group and we are now in a position to present the results obtained. Before proceeding to present the results, we would like first to introduce some background to the concept of Quality Care Standards.</p>
 <p>QUALITY</p> <ul style="list-style-type: none"> <li><span style="display: inline-block; width: 20px; height: 10px; background-color: red; margin-right: 5px;"></span> What ?</li> <li><span style="display: inline-block; width: 20px; height: 10px; background-color: green; margin-right: 5px;"></span> Why?</li> <li><span style="display: inline-block; width: 20px; height: 10px; background-color: pink; margin-right: 5px;"></span> Certification</li> </ul>	<p><b>Slide 2</b></p> <ul style="list-style-type: none"> <li>• Therefore, what is quality? – what does it entail or what does it mean?</li> <li>• Why is quality becoming an issue? Why is it essential in the area of community pharmacy?</li> <li>• And finally, the process of certification of quality.</li> <li>• We shall briefly look into these three issues.</li> </ul>
 <p><span style="display: inline-block; width: 20px; height: 10px; background-color: red; margin-right: 5px;"></span> What?</p> <p><b>Quality Care</b></p> <ul style="list-style-type: none"> <li>• Accreditation and certification</li> <li>• Compliance with regulations/law</li> <li>• Standards established</li> <li>• Modern technology</li> <li>• Efficiency</li> <li>• Inspectorate</li> </ul>	<p><b>Slide 3</b></p> <p>So the first issue is to look into what is quality. These are some of the perceptions of quality assurance in health care: <u>Accreditation and certification</u> – accreditation by a recognised body, yet this does not necessarily mean that all processes have been evaluated.</p> <p><u>Compliance with law</u> – In line with law and regulations such as qualifications of personnel but this is limited to criteria established by the law.</p> <p><u>Established standards</u> – standards are outlined – and this is the area which relates to quality care standards.</p> <p><u>Modern technology</u> – In terms of equipment available <u>Efficiency</u> – relates to service provision</p> <p><u>Inspectorate</u> – Controls undertaken to identify breaches with law or regulations</p>

	<p><b>Slide 4</b></p> <p>The second issue is, why quality care standards in community pharmacy? Within quality care there is an established structure and processes have to be followed. If this chain is adopted then you have outcomes – results reflecting the standards of professional services provided.</p>
	<p><b>Slide 5</b></p> <p>The results of the quality care process could lead to a certification of quality. For example, recently I was in Cannes in France and I noticed that a number of hair salons were displaying a label for quality service. Should we adopt similar systems for pharmacy after undertaking a quality care process?</p>
	<p><b>Slide 6</b></p> <p>Within the area of community pharmacy we have to develop quality care systems to evaluate whether the professional services provided from the pharmacies meet the required standards. But what are the required standards? How much has the process developed? Let's look at the developments in community pharmacy over the last fifty years.</p>
	<p><b>Slide 7</b></p> <p>With the industrialisation of the production of medicines occurring in the late 50s there was a loss in the apparent traditional role of the dispensing pharmacist. Actually what the industrialisation brought about was the bringing to the forefront of the hidden role of the pharmacist – that of <u>an advisor in health-related issues</u>.</p>

Community pharmacy

Advisor on health-related issues

**Slide 8**

With the emphasis on the role of the pharmacist as an advisor on health-related issues, the analysis of the impact of the role of the pharmacist gained importance. Can the added value of the pharmacist intervention be demonstrated? Or what is the impact of the pharmacist advisory role on patient care?

Community pharmacy

- Quality policy and assessment

**Slide 9**

In this situation, quality policy and assessment programmes were implemented by government regulatory authorities in the form of inspections. Such practice was accepted for a number of years as the strengths and weaknesses of community pharmacy evolved.

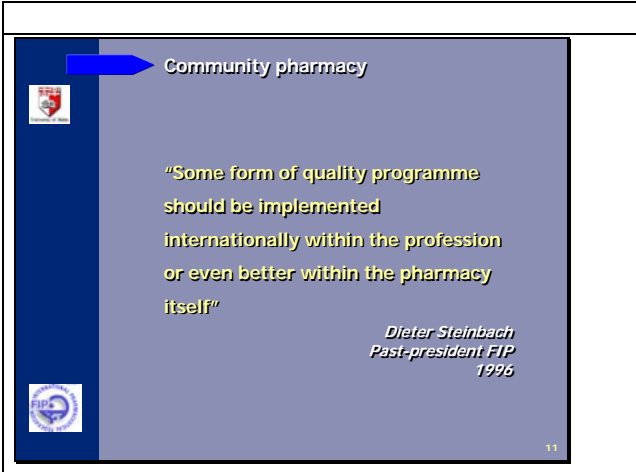

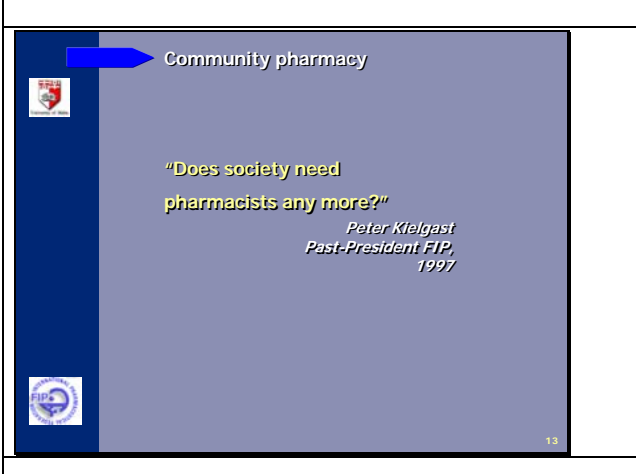

Community pharmacy

<p><b>Strengths</b></p> <ul style="list-style-type: none"> <li>• Employment</li> <li>• Accessibility</li> </ul>		<p><b>Weaknesses</b></p> <ul style="list-style-type: none"> <li>• Apparent loss of traditional role</li> <li>• Deprofessionalisation</li> <li>• Economic scenario</li> </ul>
---	---	--

**Slide 10**

The two major strengths of community pharmacy identified are that it is an area where a large percentage of pharmacists are employed and the accessibility of the pharmacist. Probably the community pharmacist is a readily available health professional whose services are under-utilised. On the other hand the weaknesses of community pharmacy which emerged were the apparent loss of the traditional role as discussed earlier, the issue of de-professionalisation of community pharmacy and the fragility of to prove the valid contribution of the community pharmacist. The issue of de-professionalisation developed mainly because of the business aspect within the setting and of the lack of control on medicines. With the increasing health expenditure, professionals are under scrutiny on the services provided. Community pharmacists are presently supported by the law, which requires that a pharmacist must be present in each pharmacy. In an ideal situation, the community pharmacist should be selected for health advice and dispensing of medicines independent of the legal requirement.

	<p><b>Slide 11</b></p> <p>Analysis of such a situation prompted the recognition of the importance of developing quality programmes within the profession. This statement was made in 1996 by Dieter Steinbach, the then president of the International Pharmaceutical Federation where he states that <u>“some form of quality programme should be implemented internationally within the profession or even better within the pharmacy itself”</u>.</p>
	<p><b>Slide 12</b></p> <p>Quality programmes were developed by national pharmacy organizations for example the Dutch organization – KNMP – in The Netherlands, and in Finland – the Association of Finnish Pharmacies.</p>
	<p><b>Slide 13</b></p> <p>The next stage, which we are experiencing now, is the pressure from outside the profession. I feel that this pressure is depicted quite strongly in the statement made by Peter Kielgast, Past-President of the International Pharmaceutical Federation, <u>“Does society need pharmacists any more?”</u></p>
	<p><b>Slide 14</b></p> <p>To meet the needs of society quality assessment processes should capture information from non-pharmacists including the consumer in the quality assessment of pharmacy services.</p>

Community pharmacy

**"In today's market-oriented, economics-driven society, all professions face the question what do I do for my customers that makes my contribution unique?"**

*Peter Kielgast  
Past-President, FIP*

In: Azzopardi L, Validation Instruments for Community Pharmacy: pharmaceutical care for the third millennium, Pharmaceutical Products Press: USA, 2000.

15

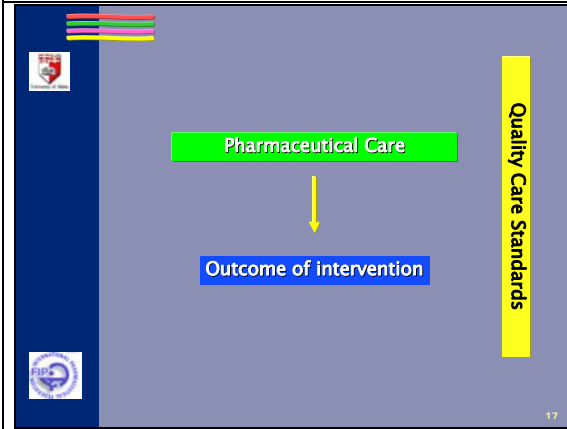

**Slide 15**

By including the perception of non-pharmacists in quality assessment, the profession is in a position to address the issue which is being presented again and again: "In today's market-oriented, economics-driven society, what do I do for my customers that makes my contribution unique?"

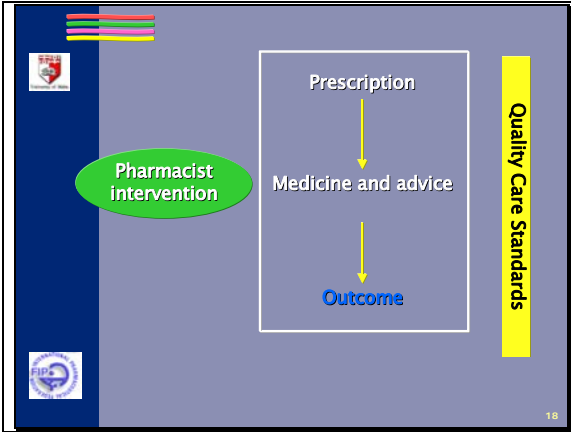

**Slide 16**

To discuss the impact of quality care standards on the practice of the profession I like to propose this comparison of the profession of pharmacy to a boat. The boat is in the sea facing forces of wind, sea currents which are the pressure experienced by the profession from consumers, governments and health financing organizations. If the boat is equipped with a rudder then it is able to determine its own course of travel. Similarly, if the profession of pharmacy has quality care systems, then it can determine its own participation in patient care.

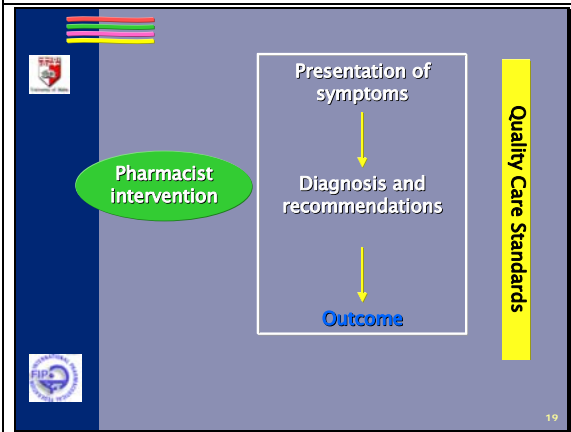

**Slide 17**

Therefore, the quality care standards can be used to evaluate the provision of pharmaceutical care.

**Slide 18**  
 For example, when dispensing a prescription, the pharmacist intervention during the discussion of pharmacotherapy is monitored through quality care standards on this process.

**Slide 19**  
 Similarly, when the patient presents a symptom the pharmacist intervention in the provision of pharmaceutical care – the diagnosis and recommended line of action could be monitored within the quality standards.

**Good Pharmacy Practice**

**Good Pharmacy Practice Guidelines**  
**1993** Adopted in Japan.  
**1997** In Vancouver presentation of revised version endorsed by the WHO Expert Committee on Specifications for Pharmaceutical Preparations.  
**1998** In The Hague adoption of the guidelines on Good Pharmacy Practice in Developing Countries.

Logos for WHO and FIP are in the top left and bottom left corners respectively. The number 20 is in the bottom right corner.

**Slide 20**  
 FIP has for the past decade been very much involved in the development of this concept in community pharmacy. FIP was very active in the establishment of baseline standards when in 1993 the Good Pharmacy Practice Guidelines were presented during the congress in Japan. This was the leadership to promote the initiation of the process in different countries. The guidelines were revised in 1997 and were endorsed by the WHO Expert Committee on Specifications for Pharmaceutical Preparations. In 1998 a report on Good Pharmacy Practice in Developing Countries was presented.

<p>Good Pharmacy Practice</p>  <p style="text-align: center;"><b>QUALITY CARE STANDARDS WORKING GROUP</b></p>  <p style="text-align: right;">21</p>	<p><b>Slide 21</b> The Quality Care Standards Working Group within the Community Pharmacy Section of FIP is working to identify status of quality care standards in community pharmacy in different countries.</p>
<p>Quality Care Standards Working Group</p> <p><b>Aim</b></p> <div style="border: 1px solid red; padding: 5px; text-align: center;"> <p>To examine the availability of standards, identify areas for improvement and assess impact of implementation.</p> </div>  <p style="text-align: right;">22</p>	<p><b>Slide 22</b> The aims of this working group were to examine the availability of standards, identify areas for improvement and assess impact of implementation.</p>
<p>Quality Care Standards Working Group</p> <p><b>Fieldwork</b></p> <div style="border: 1px solid green; padding: 5px;"> <p>A letter was sent from the FIP Community Pharmacy Section secretariat to National Organisations.</p> </div>  <p style="text-align: right;">23</p>	<p><b>Slide 23</b> Following a number of meetings within the working group to discuss the concept of quality care standards from different perspectives, a letter was sent from the Community Pharmacy Section secretariat to National Pharmacy Organisations.</p>
<p>Quality Care Standards Working Group</p> <p style="text-align: center;"><b>RESULTS</b></p>  <p style="text-align: right;">24</p>	<p><b>Slide 24</b> The different standards and data sent by the national organisations were evaluated.</p>

Quality Care Standards Working Group

**Response**  
 23 organizations replied (n=110, 21%)  
 21 organizations had quality care standards

**EUROPE**  
 Croatia  
 Denmark

25

**Slide 25**  
 Twenty-three organizations sent their documentation. These organizations represented countries from five areas worldwide. Two organizations were from Australia. Of the responding organizations, two – Indonesia and Serbia – replied that they did not have quality care standards. Yet they stated that it is an area, which is being considered in the near future.

Quality Care Standards Working Group

**Purpose for development**

**Quality Care Standards**

- ❖ Area specific
- ❖ Generic approach

26

**Slide 26**  
 Quality care standards can be developed according to two intended purposes of use. The first purpose is an area specific standard where the standard developed is intended for a specific area such as, drug information. The second purpose is a generic approach where the standard comprises various sections covering different aspects of the professional service being evaluated.

Quality Care Standards Working Group

**Purpose for development**

	No. of organizations (n=21)
Area specific	3
Generic	18

27

**Slide 27**  
 Out of the 21 organizations that replied, three had produced an area specific standard.

Quality Care Standards Working Group

**Purpose for development**

**Area Specific**

- ✓ Drug information and counselling (Nordic Association)
- ✓ Provision of pharmacist recommended medicines (Australia, Pharmaceutical Society)
- ✓ Prevention of errors in drug dispensing (Japan)

28

**Slide 28**  
 The specific areas considered were drug information and counselling by the Nordic Association, provision of pharmacist recommended medicines by the Pharmaceutical Society of Australia, and the prevention of errors in drug dispensing by the national association of Japan.

Quality Care Standards Working Group

**Purpose for development**

**Area Specific and Generic approach**

In Finland, the Association of Finnish Pharmacies prepared two area specific standards in addition to the generic standard:

- ✓ health promotion
- ✓ self-care

29

**Slide 29**

In Finland in addition to a generic standard, two area specific standards were prepared for health promotion and self-care activities.

Quality Care Standards Working Group

**Background to standards development**

Figure 1: Date of development of standards (n=21)

Date of development	Number of standards
no data	4
<1994	1
1995-1999	8
2000-2003	8

30

**Slide 30**

The chronological development shows that the availability of standards increased over the past years. There were four standards where the date of development could not be identified. Sixteen standards were developed between 1995 to date. This development probably relates to the development by FIP in 1993 of the Good Pharmacy Practice Guidelines.

Quality Care Standards Working Group

**Presentation**

**Quality Care Standards**

- ✦ Guidelines
- ✦ Audit

31

**Slide 31**

The presentation format of quality care standards could vary in two ways where the standards could be developed as guidelines or the standards could be developed for an audit exercise.

Quality Care Standards Working Group

**Presentation**

**Quality Care Standards: Guidelines**

Guidelines are presented to create a quality environment, to promote responsibility for quality, to present aims and objectives of service provided and to present standard procedures.

32

**Slide 32**

Standards that are developed as guidelines are rather general and are intended to create a quality environment, to promote responsibility for quality, to present aims and objectives of service provided, and to present standard procedures. Guidelines stipulate activities and processes that should be carried out.

<p>Quality Care Standards Working Group</p>  <p><b>Presentation-Guidelines</b></p> <p><i>Examples- Dutch Pharmacy Standard</i></p> <p>Informing and advising the patient</p> <p>1.1.0 The pharmacist's first concern is the welfare of the client. He will respect the client's own responsibility.</p> <p>1.2.0 The pharmacist supports the client to make well considered decisions regarding the use of medicines and health care products.</p>  <p>33</p>	<p><b>Slide 33</b></p>
<p>Quality Care Standards Working Group</p>  <p><b>Presentation-Guidelines</b></p> <p><i>Examples- USA</i></p> <p>The pharmacist reviews, monitors, and modifies the therapeutic plan as necessary and appropriate, in concert with the patient and healthcare team.</p>  <p>34</p>	<p><b>Slide 34</b></p>
<p>Quality Care Standards Working Group</p>  <p><b>Presentation-Guidelines</b></p> <p><i>Examples- Uganda</i></p> <p>Work surface and shelving</p> <p>Cupboards, work surfaces and shelves must be kept clean, tidy and in a good state of repair.</p> <p>All work surfaces must be smooth, washable and impervious to liquids.</p>  <p>35</p>	<p><b>Slide 35</b></p>
<p>Quality Care Standards Working Group</p>  <p><b>Presentation</b></p> <p><i>Quality Care Standards: Audit</i></p> <ul style="list-style-type: none"> <li>▪ Procedures to be followed are presented</li> <li>▪ Quantitative approach- scoring</li> <li>▪ Tangible results</li> </ul>  <p>36</p>	<p><b>Slide 36</b></p> <p>Standards that are developed as an audit process also present the procedures to be followed but the main difference is that there is a quantitative approach in terms of scoring or checking whether the procedure is carried out. Therefore after going through the standard, a tangible result is possible.</p>

Quality Care Standards Working Group

**Example-Malta** score

*Greeting the patient*

- I. The pharmacist gives immediate attention to the patient in an orderly way **3**
- II. The pharmacist greets the patient with a friendly message **2**
- III. The pharmacist addresses the patient by name **2**
- IV. The pharmacist is recognised by the patient or introduces himself to the patient **3**

Quality Care Standards Working Group

**Health promotion**

*Examples- Finland*

Health promotion is an important aspect of the activity of a community pharmacy. Prevention of diseases and health promotion are among the central objectives of Finnish health policy.

Equipment	10 (56%)
Health promotion	10 (56%)
Research & professional dev	9 (50%)
Audit	7 (39%)
Diagnostics	7 (39%)
Pharmacotherapy monitor/plan	7 (39%)

66

**Slide 66**

Research and professional development – participation in research projects and continuing professional development activities; Undertaking audit exercises and development of quality manuals; Diagnostics – availability of carrying out diagnostic tests such as blood pressure monitoring; Pharmacotherapy monitoring and plan – discussion with patients on use of medication, identifying medication-related problems.

Quality Care Standards Working Group

**.....Areas included in generic standards**

	No. of organizations (n=18)
Domiciliary services	4 (22%)
On-line services	4 (22%)
Pre-registration training	4 (22%)
Parapharmaceuticals	3 (17%)
Customer perceptions	2 (11%)

67

**Slide 67**

Customer perceptions – evaluation of feedback from clients; Domiciliary services – provision of services to house-bound persons, homes for the elderly; On-line services – availability of e-mail communication, websites; Pre-registration training – pharmacy students traineeships; Parapharmaceuticals – use of medical devices, wound care products, homeopathy.

Quality Care Standards Working Group

**Parapharmaceuticals**

*Examples- Finland*

Part of the herbal drugs and homeopathic products are sold exclusively from pharmacies. Therefore, the staff shall also get acquainted with the use of these products.

68

**Slide 68**

Quality Care Standards Working Group

**On-line services**

*Examples- UK*

Pharmacists providing on-line pharmacy services must advise patients to consult a convenient pharmacy whenever a request for a medicine or the symptoms described indicate that the patient's interests would be better served by a face-to-face consultation.

◆ developed as audit exercise

70

**Slide 70**

This slide shows the 18 areas as included in the standards produced by the organizations. The marked organizations represent a generic-audit system, which include a good number of the 18 areas considered.

Quality Care Standards Working Group

**DISCUSSION**

71

**Slide 71**

The conclusions that can be drawn out of this overview of the current situation are:

Quality Care Standards Working Group

Availability of standards

↓

spreading

72

**Slide 72**

With regard to our first aim, availability of standards – we can see that this is increasing as organisations take up the challenge to develop quality care standards.

Quality Care Standards Working Group

**Slide 73**  
 As for our second aim to identify areas for improvement – a generic approach is more robust and spans over the professional activities of a community pharmacist. The inclusion of all areas that have been identified in this analysis results in a comprehensive exercise. Developing the standards as an audit exercise would result in a more tangible outcome.

Quality Care Standards Working Group

**Slide 74**  
 As for our third aim, the impact of implementation, my colleagues from Australia, Sweden and Switzerland will be discussing their experiences. The implementation of quality care standards in community pharmacy based as a legal requirement is still in its early stages. Pharmacists should take up this process and view such an activity is beneficial to the profession since it will help us confirm the effectiveness of the pharmacist in patient care. This will contribute to the continuous development of the pharmacy services provided.

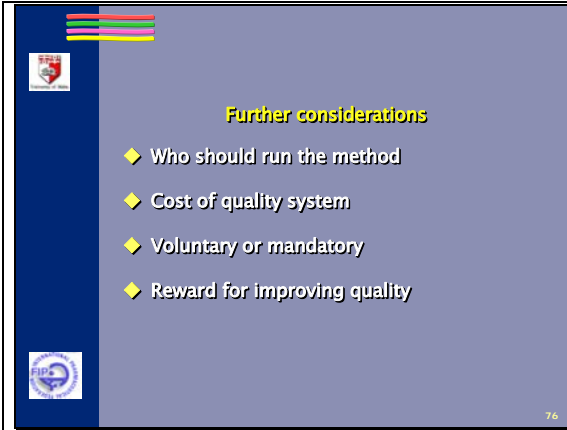

Quality Care Standards Working Group

**Recommendation**

“The Working Group strongly recommends that all member organisations embrace the introduction of Quality Care Standards and begin or continue the process as soon as possible.”

*B. Grant*  
 Chairperson, Working Group

**Slide 75**  
 The recommendation that emerges from this response analysis is that the Working Group strongly recommends that all member organisations embrace the introduction of Quality Care Standards and begin or continue the process as soon as possible. This is a statement made by Bob Grant, Chairperson of the working group after reviewing the results obtained. The Community Pharmacy Section of FIP will provide whatever assistance it can and seeks the co-operation of member organisations in the provision of further assistance to those countries seeking such help.

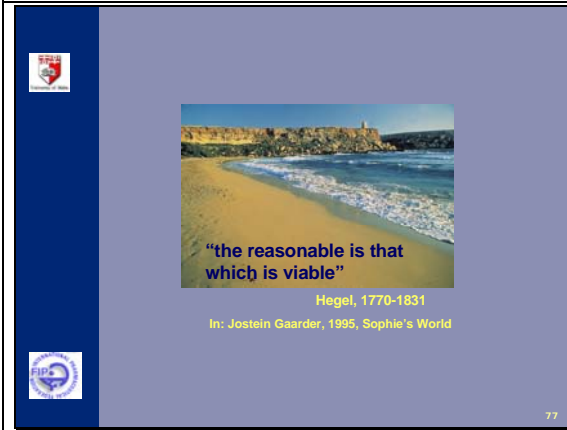

**Further considerations**

- ◆ Who should run the method
- ◆ Cost of quality system
- ◆ Voluntary or mandatory
- ◆ Reward for improving quality

76

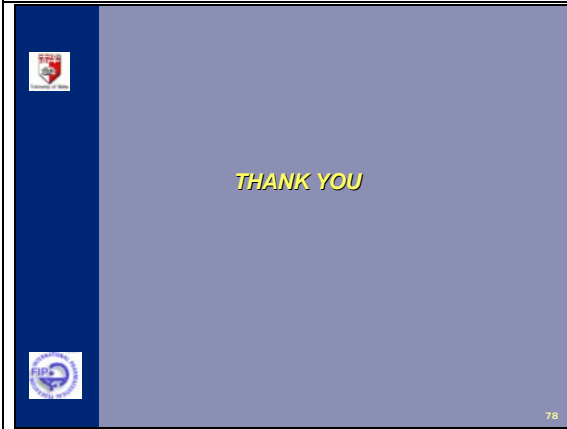

**Slide 76**  
 Once the implementation phase is more widespread, one could then start looking into further considerations such as: who should run the method – should it be run by the pharmacy association?, in conjunction with non-pharmacist members – consumers, payers?, what is the cost of the system – will the cost be included in the pharmacist professional fee? – should it be a voluntary or mandatory process?, and what is the reward for improving quality – a certificate, reimbursement that will have to be invested to improve the services of the pharmacy.

**"the reasonable is that which is viable"**  
 Hegel, 1770-1831  
 In: Jostein Gaarder, 1995, Sophie's World

77

**Slide 77**  
 Quality care standards for community pharmacy practice is an area that has developed over the past decade and the profession is now in a position to implement this process. This process should not be viewed as a necessary evil but as a process that will benefit the profession to determine a confirmation of the pharmacists' participation in patient care.

**THANK YOU**

78
